

ECO Project Funding

"You have supervised and advised throughout. Any concerns of any kind have been dealt with promptly and most satisfactorily. The work team have been polite, efficient and considerate. Our house retains its warmth and we have had little need for the central heating."

Mr. & Mrs. Brice, Belper, Derbyshire

Trade Engine hold contracts with a major Utility Company to administer and deliver ECO funding for the installation of qualifying measures under the scheme.

We operate a Framework Contract solution, in which individual Retrofit Installers can work together to deliver packages of measures in a coherent fashion. All projects are supervised by our in-house Quality Manager and administered using our cloud and mobile systems.

We take a fabric-first approach in all our work, maximising savings and consumer benefit. Our partners are assisted at every stage to ensure the delivery of fully-compliant ECO measures.

Benefits to Retrofit Installers operating under our Framework include:

- ✓ Full support with evidence and on-site technical compliance
- ✓ Ability to leverage the support of a broad network of partners
- ✓ Retrofit Coordination to claim 20% score uplifts
- ✓ Competitive rates
- ✓ Fast payment terms
